DETAILED ACTION

1. Claims 43-75 are pending in this application.

Response to Arguments

2. Applicant's arguments filed 09/07/2006 have been fully considered but they are not persuasive.

Applicant amended claims 43 and 75 to recite computer-readable medium having computer executable component. Such language is believed to be statutory subject matter under 35. U.S.C...

The examiner respectfully disagrees with the above argument. The claims when executed to perform the steps; however, the steps does not produce a concrete, useful or tangible result. They are descriptive material or software per se.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

MPEP 2106 IV. B.2. (b)

A claim that requires one or more acts to be performed defines a process.

However, not all processes are statutory under 35 U.S.C. 101. Schrader, 22 F.3d at 296, 30 USPQ2d at 1460. To be statutory, a claimed computer-related process must either: (A) result in a physical transformation outside the computer for which a practical application in the technological arts is either disclosed in the specification or would have been known to a skilled artisan, or (B) be limited to a practical application within the

technological arts.

3. Claims 43-75 in view of the above cited MPEP section, are not statutory because claims they merely recite computing steps without producing any concrete, useful and tangible results and/or being limited to a practical application within the technological arts. They are descriptive material at best software *per se*. Claims 43 and 57 recites a computer-readable medium having computer executable component, when executed by a computer cause the system to provide access to Component Object Model (COM) configuration data about application and services, in a runtime environment, sourced by one or more datastore..; however, the computer executable component has not being executed. Further, claims 43-75 recites the computing steps without producing any concrete, useful and tangible results. The claims lack the necessary physical articles or objects to constitute a machine or a manufacture within the meaning of 35 USC 101. They are clearly not a series of steps or acts to be a process nor are they a combination of chemical compounds to be a composition of matter. As such, they fail to fall within a statutory category. They are, at best, functional descriptive material *per se*. Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." Both types of "descriptive material" are nonstatutory when claimed as descriptive material *per se*, 33 F.3d at 1360, 31 USPQ2d at 1759. When functional descriptive material is recorded on some computer-readable medium, it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. Compare *In re Lowry*, 32 F.3d 1579, 1583-84, 32 USPQ2d

1031, 1035 (Fed. Cir. 1994). Merely claiming nonfunctional descriptive material, i.e., abstract ideas, stored on a computer-readable medium, in a computer, or on an electromagnetic carrier signal, does not make it statutory. See *Diehr*, 450 U.S. at 185-86, 209 USPQ at 8 (noting that the claims for an algorithm in *Benson* were unpatentable as abstract ideas because "[t]he sole practical application of the algorithm was in connection with the programming of a general purpose computer.")
